

SAN

The Dell/EMC FC4700 SAN is used to store Lynx users home directories, groupwise post offices, various Microsoft SQL databases, Lanvision data, Images for CAIR(Center for Advanced Imaging), and various shared directories used by clinicians and administrators in the hospital.

The data is stored on the SAN located in the computer room at 3USB and then mirrored to another SAN located at harborview Towers. A snapshot is taken of the data at Harborview towers and then backed up to tape.

*Used Category - The number for disk space used includes the overhead associated with the Operating System (20% free space requirement by Microsoft).

**Free Space - This number may be negative due to the fact that the 20% free space requirement for the Microsoft OS has been violated.
